This report and those involved in its preparation do not endorse any product, process, or company stated herein. Use of these means by anyone does not imply certification by the Air Force CALS Test Network (AFCTN).

Contents

1. Introduction

1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-Cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Northrop Corporation's interpretation and use of the CALS standards in transferring technical publications data. Northrop used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on a 9-track magnetic tape.

2. Test Parameters

Test Plan: AFCTB 93-067

Date of Evaluation: 07 July 1993

Evaluator:
George Elwood
Air Force CALS Test Bed
DET2 HQ ESC/AV-2P
4027 Colonel Glenn Hwy
Suite 300
Dayton OH 45431-1672

Data Originator:
John P. Kent
Northrop Corporation
B-2 Division
L591/UB
8900 E. Washington Blvd
Pico Rivera CA 90660-3765
(310) 948-0624

Data Description:
Technical Manual Test
- 2 Document Declaration files
- 2 Document Type Definition (DTD)
- 1 Initial Graphics Exchange Standard (IGES) file
- 2 Text/Standard Generalized Markup Language (SGML) files
- 1 Raster file
- 1 Computer Graphics Metafile (CGM) file

Data Source System:
1840

MIL-D-28003

3. 1840A Analysis

3.1 External Packaging

The tape arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a box in accordance with ASTM D 3951. The exterior of the box was marked with a magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3.

The tape was enclosed in a barrier bag as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed the label indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1. Enclosed in the box was a packing list showing all files recorded on the tape.

3.2 Transmission Envelope

The 9-track tape received by the AFCTB contained MIL-STD-1840A files. The files were named per the standard conventions.

3.2.1 Tape Formats

The tape was run through the AFCTN *Tapetool v1.2.9* utility. No errors were encountered while evaluating the contents of the tape labels.

The tape was read using the XSoft *CAPS read1840A* utility without any reported errors.

The physical tape structure meets the CALS MIL-STD-1840A requirements.

3.2.2 Declaration and Header Fields

No errors were found in the Document Declaration files and data file headers.

This portion of the tape meets the CALS MIL-STD-1840A requirements.

4. IGES Analysis

The tape contained one (1) IGES file. This file was evaluated using IDA's *parser* and *verifier* set for CALS Class I. No CALS errors were reported during this procedure.

The AFCTB has several tools for viewing IGES files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings.

The file was read using AUTODESK's *AutoCAD R12* with translator version 5.1.

The file was converted using Cadkey's *ig2c* utility. The resulting file was read into Cadkey's *Cadkey*, displayed and printed.

The file was read into Carberry's *CADLeaf* software without a reported error.

The file was read using IDA's *IGESView* and *IGESView for Windows*, without a reported error.

The IGES file was converted using Rosetta Technologies' *Prepare* without a reported error. The resulting file was read into Rosetta Technologies' *Preview*, displayed and printed.

The IGES file meets the CALS MIL-D-28000A specification.

5. SGML Analysis

The tape contained two (2) DTDs and two (2) Text files. The AFCTB has several parsers available for evaluating submitted DTD and Text files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. These products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings unless specified in the report. Changes to DTD or Text files required by each system are not documented in the report.

The Text and DTD files from the tape were evaluated using the following parsers:

Datalogics' *ParseStation*
Exoterica's *Validator exl*
Exoterica's *XGMLNormalizer*
McAfee & McAdam's *Sema Mark-it*
Public Domain's *sgmls*

No errors were reported by any of the parsers available in the AFCTB. The SGML files meet the CALS MIL-M-28001A specification.

6. Raster Analysis

The tape contained one (1) Raster file. This file was evaluated using the AFCTN *validg4* utility. This program reported that the file meets the CALS MIL-R-28002A specification.

The file was read into the AFCTN *calstb.475* viewing utility. No problems were noted.

The AFCTB has several tools for viewing Raster files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use

of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings.

The Raster file was read into Carberry's *CADLeaf* software without a reported error. The image was displayed and printed.

The file was read into IDA's *IGESView* and *IGESView for Windows* without a reported error.

The file was read into Inset Systems' *HiJaak for Windows* without a reported error.

The Raster file was converted using Rosetta Technologies' *Prepare* without a reported error. The resulting file was read into Rosetta Technologies' *Preview*, displayed and printed.

The Raster file meets the CALS MIL-R-28002A specification.

7. CGM Analysis

The tape contained one (1) CGM file. The file was evaluated using ATC's *MetaCheck* with CALS options. This software tool reported that the file meets the CALS MIL-D-28003 specification.

The AFCTB has several tools for viewing CGM files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor and indication of CALS capability. All operations were performed using the default settings.

The file was viewed using ATC's *MetaView* software with errors reported because of font problems. The displayed image had notable font errors.

The file was read into Carberry's *CADLeaf* software and displayed without a reported error. The displayed image appeared to be correct.

The file was read into Inset Systems' *HiJaak for Windows* with a reported critical error. Nothing displayed.

The file was imported directly into Island Graphics' *IslandDraw* without a reported error. When viewed on the screen, text overflow was noted in the restricted text box. Errors were also noted in ellipical arc blocks.

The file was imported into the Micrografx *Designer* without a reported error but nothing displayed.

According to Michael Harrison of Micrografx, "Micrografx is aware of the problems associated with reading these files and is working on a solution to be implemented in a future release of our products."

The file was imported into SPC's *Harvard Graphics v3.05* with four reported errors. Line Style, Adjustment of Points, Non-CGM entities, and not translated entities were reported during this procedure. The resulting file was not usable.

The file was imported into Corel's *Ventura Publisher* with a reported error indicating a non-valid file format.

The CGM file meets the CALS MIL-D-28003 specification.

8. Conclusions and Recommendations

The physical tape structure of the MIL-STD-1840A tape from Northrop Corporation was correct. No errors were reported in the tape headers or the CALS Document Declaration files and data file headers. The tape structure meets the CALS MIL-STD-1840A requirements.

The IGES file meets the CALS MIL-D-28000A specification.

The SGML files meet the CALS MIL-M-28001A specification.

The Raster file meets the CALS MIL-R-28002A specification.

The CGM file meets the CALS MIL-D-280003 specification.

The tape meets the CALS MIL-STD-1840A requirements.
